PROFILE

Software engineer focused on backend and full-stack development. I build reliable web applications, APIs and data-driven systems with TypeScript, Node.js, PostgreSQL, React and Next.js. My work spans understanding a product need, implementing the system and refining it through testing and feedback, with a strong interest in reliable APIs, data flows and software that is straightforward to operate and maintain.

EXPERIENCE

Software Engineering Trainee · Reduzer Training Institute (Reduzer School)

Sep 2025 – Sep 2026

- Contributed to the Reduzer School landing page from research, positioning, copy and responsive implementation through deployment readiness, QA and conversion-focused iteration, using TypeScript, Next.js and React.
- Built the PostHog analytics integration and a Tally webhook pipeline that sends applicant form submissions into PostHog, enriching behavioral data for funnel tracking and analysis.
- Analysed pageviews, traffic sources and sign-up conversion events to understand acquisition, engagement and where applicants dropped off in the flow.

Self-Directed Software Development · Independent Developer

Before Sep 2025

- Built a foundation in web development, databases, APIs and production-minded backend systems through self-directed study and hands-on experiments.

SELECTED PROJECTS

Merchandising Management System capstone · in progress

Node.js · PostgreSQL · RabbitMQ · Redis

- Distributed retail platform built from independent domain services, each with its own database, communicating through RabbitMQ events.
- Architecture includes an OIDC backend-for-frontend, Redis-backed sessions and a same-origin authenticated API gateway; authentication and production security work are underway.

Log Ingestion Engine

Node.js · RabbitMQ · PostgreSQL · Redis

- Asynchronous ingestion pipeline that decouples ingestion speed from write throughput, with backpressure handled at the rate limiter and idempotent, horizontally scalable workers so retries never duplicate writes.
- Failure handling: 5-second RabbitMQ publish timeout, secondary fallback path, exponential-backoff retries and rotating JSON dead-letter storage instead of silently dropping events; per-destination concurrency guards prevent overlapping flushes.

Rate Limiter Middleware

Node.js · Express · Redis · Lua · Vitest

- Reusable Express middleware with fixed-window and token-bucket algorithms, configurable caller identification and policies, and standard HTTP rate-limit signals.
- Atomic Redis Lua scripts keep distributed state consistent across concurrent requests and multiple application instances.

SKILLS

Languages & frameworks	TypeScript, JavaScript, Node.js, Express, React, Next.js, Tailwind CSS
Data & messaging	PostgreSQL, MongoDB, Redis, RabbitMQ, Drizzle ORM
Analytics	PostHog
Tools & platforms	Git, GitHub, Vercel, Cloudflare Pages, Firebase, Figma, Bash scripting

EDUCATION & CERTIFICATIONS

Software Engineering Bootcamp · Reduzer Training Institute — Sep 2025 – Sep 2026

KCSE · St. Augustine's Mirogi Boys High School — 2015 – 2018

Software Engineering Certificate · Reduzer Training Institute — 2026

CyberOps Associate · Cisco Networking Academy — 2024

Digital Marketing Certificate · Aleph Digital Academy — 2023
